

# 150-foot collapsible shipping container used in environmental protection project

## Overview

---

COLLAPSECON is the collapsible shipping container pioneering the future of global trade. It's practical and rigid design saves on space, cost and handling, and helps to significantly reduce industry emissions.

COLLAPSECON is the collapsible shipping container pioneering the future of global trade. It's practical and rigid design saves on space, cost and handling, and helps to significantly reduce industry emissions.

COLLAPSECON is the next evolution of shipping containers - a fully automated collapsible container that will improve operational efficiencies, deliver economic savings and reduce environmental impact across the supply chain, all without requiring a fundamental change to the industry or global.

The GenFlat Container is engineered to be a substitute for the standard Marine Container. Built from mild steel and Corten, GenFlat exceeds current strength and rigidity standards. Once four GenFlat containers are stacked and locked together, they can be lifted as a single unit, ready for.

Collapsible shipping containers are designed to offer flexibility in transportation and storage. Unlike traditional containers, which maintain a fixed shape and size, collapsible containers can be folded down when empty. This innovative design reduces shipping costs and minimizes environmental.

It reduces carbon footprint and energy consumption, benefiting the shipping industry. Aligning with green architecture principles, it embraces sustainability through solar panels, mitigating climate change in recent years. Moreover, it gives new life to cargo ships, representing one of the major.

How GenFlat Containers have used innovation to make this new container technology cost-effective and sustainable The idea of a collapsible shipping container has been around for several years. There have been various designs, folding techniques, collapsing speeds, container sizes, and methods of.

Traditional shipping containers, typically made from energy-intensive materials like steel and aluminum, not only leave a substantial carbon footprint but also pose challenges in terms of waste disposal and recyclability. As the industry evolves, a

promising solution emerges in the form of.

## 150-foot collapsible shipping container used in environmental protection

### White Paper: Answering the Top Five Doubts About Collapsible Containers

GenFlat collapsible containers ("GenFlats") are built from mildsteel and Corten, giving them a strength and rigidity that exceeds industry standards. GenFlat combines the ...
