The two 4 ohm taps are configured such that you can connect Qty: 1 4 ohm load to Qty: 1 4 ohm amp jack, or Qty: 2 8 ohm loads to Qty: 2 4 ohm amp jacks (two 8 ohm cabinets in parallel is a total load of 4 ohms on the amp). The mesa manual has a whole section on this, PDF for your amp is on their.

For guitarists seeking to achieve a fuller sound, increased volume, or wider sound dispersion, connecting two speaker cabinets to a single amplifier head can be a game-changer. This setup allows you to harness the power and tonal characteristics of two speaker cabinets simultaneously. In this.

I have an Orange Terror 500 amp with two 1x12 cabs. Should I be plugging each cab into the amp head, or should I plug one cab into the amp, and then connect one cab to the other?

I typically have plugged both cabs into my amp, but recently in the studio the engineers only plugged one cab in and.

I am hoping that another OX Amp Top Box has discovered a switching method so I can choose between two tube amp heads to go to the OX Amp Top Box, and then be able to choose which cabinet or pair of cabinets that I can select. I did an Internet search and did not come away with any level of.

Question about using multiple speaker cabinets with my PS-2A. I understand that Power Station speaker ohm selector switch should be set at 8 ohms for this configuration. Should I set my ohm setting on my head at 8 ohm even though I am only using 1 output on my amp?

I want to make sure I have.

The reason is to have two totally different sounds: for example to have the clean channel of a Fender amp and the overdrive channel of a Marshall, or (and this problem is particularly felt by those who have a single channel head) to use different settings from two identical heads. The problem of.
