

95W solar panel

Overview

Why should you install solar with Powerwall?

When you install solar with Powerwall, the Tesla app gives you control over all the products in your Tesla ecosystem. Decide if you want to optimize your generated energy for savings, backup protection—or both. See how much energy your system is generating, how it's being used and how much it's helping you save.

How do solar panels work?

Rail-free mounting keeps panels close to your roof and panel skirts hide hardware and edges from view. Solar panels generate energy from sunlight for you to use in your home. When paired with a Powerwall home battery, you can store your excess energy for use whenever you want.

How do Tesla Solar panels work?

Generate your own clean energy whenever the sun is shining with Tesla solar panels. Tesla uses solar panels that offer a sleek and modern take on traditional panels. With our proprietary mounting hardware, panels can be installed close to your roof without the need for rails, so they blend in with your roofline.
