

Aluminium Energy Storage Project

Overview

REVEAL project develops a new technical solution for storing large amounts of energy with an energy storage density of more than 15 MWh/m³ at low cost for the production of heat and electricity in winter.

REVEAL project develops a new technical solution for storing large amounts of energy with an energy storage density of more than 15 MWh/m³ at low cost for the production of heat and electricity in winter.

This new REVEAL project's study demonstrates that Al6060 cut wire granules offer a safe, efficient, and scalable aluminium fuel solution for renewable energy storage, enabled by a unique pore-forming oxidation mechanism. Aluminium (Al) is a strong candidate for Renewable Metal Fuel (ReMeF) due to.

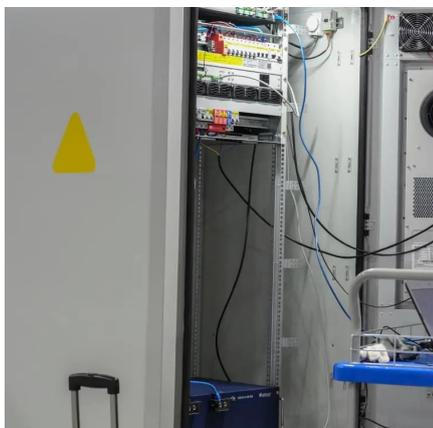

REVEAL project develops a new technical solution for storing large amounts of energy with an energy storage density of more than 15 MWh/m³ at low cost for the production of heat and electricity in winter. REVEAL is co-funded by the European Union's Horizon Europe research and innovation programme.

The REVEAL project addresses this by developing an innovative Power-to-Aluminium (Power-to-Al) system that converts aluminium oxide into aluminium metal as a renewable fuel. This solution offers a high energy density of over 15 MWh/m³, with conversion costs under 7 ct/kWh, enabling efficient.

Aluminium plays a crucial role in the green energy transition, serving as a key material in energy generation, transmission, and storage technologies. In 2025, energy efficiency will no longer be a buzzword companies use to greenwash their products. As time progresses, mindful energy consumption is.

Aluminium Energy Storage Project

Carbon Free Aluminum Production with Inert Electrodes for Clean Energy

The aim of the project is to combine the zero-carbon aluminum production process (through inert anodes) and renewable energy to create a long-term energy storage solution ...
