

# Battery cabinet inspection base station set

## Overview

---

How should a battery cabinet be inspected?

The battery cabinet, tray, rack, etc. shall be inspected for sharp edges that could cause damage to the battery casing. Batteries shall not be dropped, slid, placed on rough or uneven surfaces such as tray lips or grated flooring. Mishandling of batteries could result in equipment damage or human injury.

What equipment do I need for a battery installation?

Per IEEE 1188 recommendations, the following minimum set of equipment for safe handling of the battery and protection of personnel shall be available: Safety glasses with side shields, or goggles, or face shields as appropriate. (Consult application specific requirements) Electrically insulated gloves, appropriate for the installation.

How do you store a lead-acid battery?

Cells should be stored indoors in a clean, level, dry, cool location. Recommended storage temperature is 0°F to 90°F (-18°C to 32°C). Stored lead-acid batteries self discharge and must be given a boost charge six months from the date of manufacture to prevent permanent performance degradation.

What equipment is needed to lift batteries?

When lifting batteries, the proper equipment is needed such as a forklift or a portable crane. Always check the lifting capacities of the equipment being used and never lift more than one module and or cell at a time. Cells should be stored indoors in a clean, level, dry, cool location.
