

# Battery pack with pc

## Overview

---

How to buy a battery bank for a laptop?

If you plan to buy a battery bank for your laptop, you may need a bag to carry it. Start by checking the battery of the device you wish to charge. Portable power packs measure their capacity in milliamps per hour (mAh), and the higher the figure, the larger the capacity.

Which battery pack charger is best for laptop?

Lighter battery pack chargers are a better choice for powering mobile devices such as smartphones and tablets. A convenient alternative to USB wall chargers, they're small enough to fit in a bag, purse, or even a pocket. However, portable battery banks designed for laptops are large, and sometimes heavy, which might limit your options.

How much power does a laptop battery use?

You should look for a laptop battery pack with at least one USB-C power output of 60 watts or more. That's the standard for most 13-inch (or bigger) notebooks, so any dependable power bank should have this capability. To be fair, some ultraportable laptops, such as the MacBook Air, can charge sufficiently with 30 watts or less.

Do laptop batteries need a power bank?

There's no official definition, however. Laptop batteries are simply larger and need a bigger supply of power to give them a meaningful charge. How do you fast charge a power bank?

You can charge a power bank exactly as fast as the power bank's internal mechanisms will allow.
