Like breakers, fuses protect your electrical system from overloads caused by loose wires, faulty outlets, or too many devices running on the same circuit. However, instead of tripping, a fuse blows or burns out when overloaded. Once this happens,

it can't be reset—a blown fuse must be replaced to.

A blown fuse might seem like a minor hassle, but it's often your home's way of telling you something's off with the electrical system. Maybe the lights flicker when you turn on the microwave, or you've noticed a strange burning smell near an outlet. Whatever the case, it's worth paying attention.

Both circuit breakers and fuses are safety devices designed to regulate the electrical current in your home and protect your electrical system from overloading or short circuits. But they do this in very different ways. What is a circuit breaker?

A circuit breaker is a switch that automatically.
