

Bolivia Hybrid Power Plant

Overview

This PV-diesel hybrid power plant with battery storage system has an estimated output of approximately 5MW and is designed to generate enough clean solar power to cover about half of the energy demand in the provincial capital of Cobija and neighboring towns in northern Bolivia.

This PV-diesel hybrid power plant with battery storage system has an estimated output of approximately 5MW and is designed to generate enough clean solar power to cover about half of the energy demand in the provincial capital of Cobija and neighboring towns in northern Bolivia.

The world's largest PV-diesel hybrid power plant system with battery storage was commissioned in December 2014, in the Bolivian province of Pando. SMA is not only supplying photovoltaic inverters for this project, but is also providing an SMA Fuel Save Controller for demand-driven control of solar.

The world's largest PV-diesel hybrid power plant system with battery storage was commissioned in December 2014, in the Bolivian province of Pando. SMA is not only supplying photovoltaic inverters for this project, but is also providing an SMA Fuel Save Controller for demand-driven control of solar.

The world's largest PV-diesel hybrid power plant with a battery storage system is currently being built in the Bolivian province of Pando. SMA has been not only selected to supply the PV inverters for this project, but also SMA's Fuel Save Controller, which recently won the Intersolar Award in the.

ly on natural gas(AEtN,2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) a gy independence and security. Due to the lack of GHG emission costs in BPS-3 fuel costs remain for the fossil fuels used in t e he t a y electrified.

The world's largest PV-diesel hybrid power plant with battery storage system is currently being built in the Bolivian province of Pando. SMA Solar Technology AG (SMA) is not only supplying photovoltaic inverters for this project, but is also providing an SMA Fuel Save Controller for demand-driven.

Grid-tied systems are solar panel installations that are connected to the utility

power grid. With a grid-connected system, a home can use the solar energy produced by its solar panels and electricity that comes from . Thanks to a photovoltaic diesel hybrid power plant located in Pando's capital.

Bolivia Hybrid Power Plant

Cobija, Bolivia , SMA America

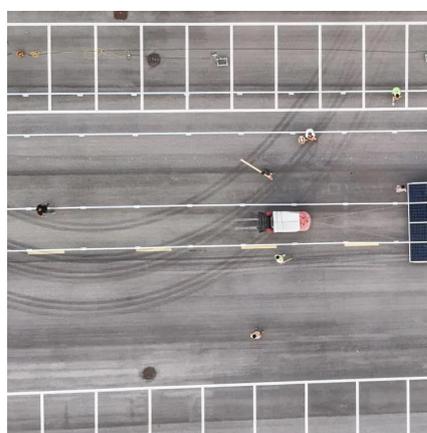

The world's largest PV-diesel hybrid power plant system with battery storage was commissioned in December 2014, in the Bolivian province of Pando.
