Overview

An emergency power system is an independent source of electrical power that supports important electrical systems on loss of normal power supply. A standby power system may include a , batteries and other apparatus. Emergency power systems are installed to protect life and property from the consequences of loss of primary electric power supply. It is a type of

Eco-ESS battery systems are designed to store energy efficiently, providing power when it's most needed. In the event of a power outage, these systems can automatically supply electricity to critical loads, ensuring that lighting, communication, and essential appliances remain.
