

Cameroon Super Aluminum Electrolytic Capacitor

Overview

Aluminium electrolytic capacitors are (usually) polarized whose (+) is made of a pure foil with an surface. The aluminum forms a very thin insulating layer of by that acts as the of the capacitor. A non-solid covers the rough surface of the oxide layer, serving in principle as the second electrode ().

Aluminum electrolytic capacitor

Overview Basic information Materials Production Styles History Electrical parameters Reliability, lifetime and failure modes

Aluminium electrolytic capacitors are (usually) polarized electrolytic capacitors whose anode electrode (+) is made of a pure aluminium foil with an etched surface. The aluminum forms a very thin insulating layer of aluminium oxide by anodization that acts as the dielectric of the capacitor. A non-solid electrolyte covers the rough surface of the oxide layer, serving in principle as the second electrode (cathode) ...
