

Corrosion-resistant Portuguese photovoltaic energy storage containers used in railway stations

Overview

Why is corrosion resistance important for macro packaging?

For macro packaging, ensuring the corrosion resistance of packaging materials in the TES system has become its main problem, because it is not only related to the safety of food in the transportation process but also related to the long-term use and complete function of the entire energy storage system , .

What is corrosion inhibitor technology?

The corrosion inhibitor molecules are adsorbed on the surface of the container to form a protective layer, which greatly reduces the corrosion rate of the container in an acidic environment. At present, corrosion inhibitor technology is also developing in the field of energy storage.

Which corrosion inhibitor has the best anticorrosive effect on carbon steel?

The electrochemical test results showed that the corrosion inhibition rates of methionine and valine inhibitors were 87.66 % and 63.71 % respectively. When the molar ratio of methionine to valine was 1:1, the corrosion inhibitor had the best anticorrosive effect on carbon steel and the anticorrosive efficiency was up to 96.85 %.

Are corrosion inhibitors effective in perishable environments?

The proper use of corrosion inhibitors can make metals and other materials effective in perishable environments. Because of the good inhibition effect and high economic benefit of corrosion inhibitor technology, the method has been widely used at present.

Corrosion-resistant Portuguese photovoltaic energy storage containers

ALUMERO systems -- solarfold

The innovative and mobile solar container contains 200 photovoltaic modules with a maximum nominal output of 134 kWp and, thanks to the lightweight ...
