

# Current price of lithium iron phosphate energy storage

## Overview

---

Prices decreased to USD 15,829/MT in September 2025, following improved import conditions and better vessel availability. Favorable currency dynamics reduced landed CIF costs for Asian-origin cathode materials.

Prices decreased to USD 15,829/MT in September 2025, following improved import conditions and better vessel availability. Favorable currency dynamics reduced landed CIF costs for Asian-origin cathode materials.

Global lithium iron phosphate (LFP) prices declined across most major regions during the third quarter of 2025, according to IMARC Group's latest publication, "Lithium Iron Phosphate Prices, Trend, Index and Forecast Data Report 2025 Edition" with updated insights for Q3 2025. The market softened.

The analysis from Taipei-based intelligence provider TrendForce finds that the average price for lithium iron phosphate (LFP) energy storage system cells continued to slide in August, reaching CNY 0.35/Wh (\$0.049/Wh). Meanwhile, demand for large capacity cells continued to grow at a steady pace.

Recent price quotes for energy storage cells have maintained their upward momentum. According to the latest data, prices for LFP prismatic cells are as follows: Recent price increases have been underpinned by both cost pressures and supply-demand dynamics. On the upstream side, lithium carbonate.

What factors are driving current price volatility in lithium iron phosphate (LFP) raw materials?

Price volatility in lithium iron phosphate (LFP) raw materials stems from a complex interplay of supply chain constraints, geopolitical shifts, and demand fluctuations. Lithium carbonate and lithium.

Average lithium-ion battery pack costs fell 8% to \$108/kWh in 2025, a 93% drop since 2010. China leads at \$84/kWh with LFP, while stationary storage packs hit benchmark lows of \$50/kWh amid innovation and hedging strategies. Global lithium-ion battery prices continued their downward trajectory in.

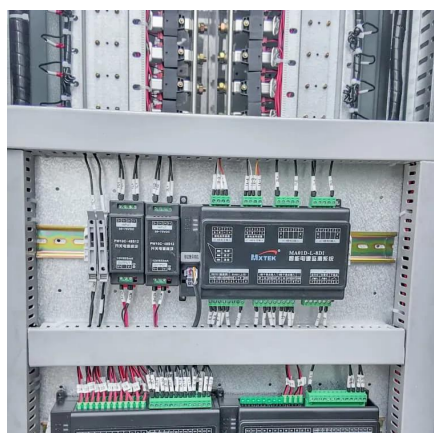

The energy storage sector is experiencing rapid growth, driven by the increasing

use and decreasing cost of lithium iron phosphate batteries, surpassing the growth rate of electric vehicle sales. The shift towards LFP batteries, which do not use cobalt or nickel, is significantly impacting global.

## Current price of lithium iron phosphate energy storage

### [Demand for large capacity battery storage cells ...](#)

The average selling price (ASP) for lithium iron phosphate (LFP) energy storage cells fell to about CNY 0.35/Wh in August -- a 6% ...
