

Dominic Folding Container for Marine Use

Overview

What is a marine charging system?

Vessel charging solutions are designed for ships that have an energy storage system – for example a marine battery. A marine charging system works in much the same way as a charging system for cars and other electric road vehicles. Vessel charging systems are not yet standardized like alternative marine power (AMP) systems.

Are vessel charging systems standardized?

Vessel charging systems are not yet standardized like alternative marine power (AMP) systems. They often require fast charging or DC charging, though normal charging or AC vessel charging is also possible. The IEC 80005 standardized AMP system can be used for charging if the port stay is long enough, such as for RoPax or RoRo vessels.

What is a dedicated shipping container?

Dedicated shipping containers are used for the transport of general cargo and cargo that is temperature-sensitive. The International Maritime Organization (IMO) introduced standardization of containers in the late 1960s' aimed at bringing consistency in the loading, unloading, and transportation of such containers.

What is a promariner Charger?

ProMariner products are designed for easy installation and effortless operation, so you can focus on enjoying the water. ProMariner chargers benefit from state-of-the-art features and functionalities that extend battery lifespan and optimize charging cycles. Find ProMariner products globally [PROMARINER](#).
