Electric double layer capacitors and supercapacitors are a class of electrolytic (polarized) capacitors that offer exceptionally high capacitance values in relation to their physical size and low voltage ratings; individual devices have ratings of a few volts at most, though products incorporating.

The global EDLC (supercapacitor) market is experiencing robust growth, currently valued at approximately \$3 billion. Projections indicate a strong Compound Annual Growth Rate (CAGR) of around 15% over the next decade, potentially reaching \$10-15 billion by 2033. This expansion is fueled by.

Electric double layer capacitors are two-terminal energy storage devices that collect voltage as current flows through an electric circuit. They generate an electrical field between two conductor plates and are also known as supercapacitors. RS offer an extensive range of high-quality double layer.

A double-layer supercapacitor (also known as an Electric Double-Layer Capacitor or EDLC) is an advanced energy storage device widely used in electronic and power systems. Unlike traditional capacitors, it stores energy electrostatically at the interface between an electrode and an electrolyte.
