

# EG8011 grid-connected inverter

## Overview

---

How do I connect gridboss to EG4® hybrid inverters?

y equipped). When connecting GridBOSS to EG4® hybrid inverters, the RSD wiring only needs to connect to the master inverter. When using an external RSD/ESS initiator, it is installed inline between the inverter and GridBOSS as shown in the.

Can a gridboss be connected directly to the inverter?

nfiguration. The GridBOSS should remain powered off. The inverter grid port cannot be connected directly to the grid. Do not install the inverter's CT clamps since GridBOSS has internal CT clamps. Verify the battery or battery bank and PV array connected to the inverter(s) are full.

Why should you choose EG4 inverters?

EG4 inverters intelligently limit power exchange to prevent overloading electrical systems, eliminating the need for expensive main panel upgrades. This advanced control ensures grid stability while reducing installation costs. Cost Savings: Avoid expensive main panel upgrades through smart power management.

Do EG4 inverters need a retrofit?

Future-Proof Design: EG4 inverters evolve with changing grid standards, eliminating the need for future retrofits. EG4 inverters offer advanced grid interaction, mastering the four UL 1741 CRD-PCS operational modes while providing smart export/import limiting.
