

EU energy storage module equipment prices

Overview

How many energy storage projects are there in Europe?

The European Energy Storage Inventory provides impressive figures on the current state of energy storage capacities in Europe. According to the platform, 905 projects with a total output of 66 gigawatts are currently in operation.

Why is energy storage important in the EU?

The European Union has created a comprehensive regulatory framework in recent years to promote the development and use of energy storage technologies. A central element of this framework is the recognition of energy storage as an independent component of the energy system in the EU electricity market directive.

What is the largest energy storage project in Europe?

Particularly noteworthy is the ambitious project in Alfeld (Lower Saxony), which is considered the largest approved storage project in Europe with a performance of 137.5 megawatts and a storage capacity of 275 megawatt hours.

How can the Energy Union help build a sustainable industrial base?

The comprehensive governance framework of the energy union and the strategic action plan on batteries (annex 2 to the Communication on sustainable mobility for Europe (COM/2018/293)), were important steps to help build a globally integrated, sustainable and competitive industrial base for batteries in the EU.
