Who is Eastern communications?

Over the last six decades, Eastern Communications has evolved into one of the nation's largest mission critical communications providers. With deep, industry-leading technical expertise and a zealous commitment to customer service, our range of capabilities ensures reliable, constant connectivity in the field - no matter what the circumstances.

Do communication base stations perform post-earthquake functionality using Bayesian network?

A method to evaluate the post-earthquake functionality of communication base stations using Bayesian network is developed. The dependence between the equipment and its hosting building structure, and the impact of power outages are considered. The method is validated using seismic damage data from the Ludian Earthquake.

What is a typical communication equipment room (ground base station)?

Fig. 2. Layout of the typical communication room (Ground base station). 2.1.2. Role of Each Component The main forms of the communication equipment room are civil construction room, color-coated steel room [33, 34], and integrated (container) room.

Why should you choose eastern communications?

Whether your team is operating in remote and rugged conditions, in the middle of a RF-adverse urban environment, or needs the ability to transition between both, we stand proudly ready to ensure your communications work the first time, every time. "Eastern is incredibly responsive and reliable.
