New York established energy storage as a key part of its clean energy strategy in 2018 and remains a leading U.S. storage market today. The state's Value of Distributed Energy Resources (VDER) tariff, or Value Stack, compensates solar and storage based on when and where they supply power, making.

Energy storage systems in the clean energy transition. It provides an overview of the global energy storage market and presents the key challenges, including power fluctuations, and aligning supply and demand. Additionally, ESS provide grid ancillary services such as frequency control, energy time-shifting, .

Passage of the Inflation Reduction Act (IRA) in 2022 brought a major shift in the American clean energy industry, which became flush with government funding and incentives. Three summers later, another budget bill is reshaping clean energy in the U.S. The "One Big Beautiful Bill Act" (OBBBA) rolls.
