How do you use floor/ceil in math, e.g. how does it work exactly?

When floor a number, you can think of it as replacing the Mantissa with 0 $$lfloor 2.31 rfloor = 2 + 0 = 2$$ and ceil can be thought of as replacing the mantissa with 1. $$lceil 2.31 rceil = ...$$

Big floor symbols

A LaTeX-y way to handle this issue would be to define a macro called, say, floor, using the DeclarePairedDelimiter device of the mathtools package. With such a setup, you ...

How to write ceil and floor in latex?

Is there a macro in latex to write ceil(x) and floor(x) in short form? The long form left lceil{x}right rceil is a bit lengthy to type every time it is used.

Adjusting the height of math floor symbol

The height of the floor symbol is inconsistent, it is smaller when the fraction contains a lowercase letter in the numerator and larger when the fraction contains numbers or ...

'Floor' and 'ceiling' functions

Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do ...
