

# French solar Glass Project

## Overview

---

Why should French companies invest in solar panels?

In addition, they should secure solar panel supply contracts, in particular from French producers in light of the tax credit granted to them. These growing greening and solarization obligations should be considered in the context of the support offered to the French green industry by the French Finance Act for 2024.

How is the French glass sector implementing a decarbonisation strategy?

The French glass sector is implementing a decarbonisation strategy which includes the use of decarbonised energy and raw materials, improved energy efficiency, glass recycling and eco-design of products. This includes developing 100% electric ovens or hybrid ovens using 80% electricity and 20% gas, depending on oven size and glass type.

Which float glass is best for solar applications?

Arsenic- and antimony-free extra clear float glass for solar applications. SunMax Premium is exclusively produced in a float glass process. The industrial float glass process adheres to very strict production tolerances and guarantees the lowest possible defect density. Read more about some of our recent selected finished success stories.

## French solar Glass Project

### Glass made for the sun

Your single source: High-efficient float glass production, glass coating, glass processing as well as high-capacity production of flat solar mirrors. Everything is highly automated, precise and ...
