

# Grid-connected solar inverters can be divided into

## Overview

---

Grid-tie inverters convert DC electrical power into AC power suitable for injecting into the electric utility company grid. The grid tie inverter (GTI) must match the phase of the grid and maintain the output voltage slightly higher than the grid voltage at any instant. A high-quality modern grid-tie inverter has a fixed unity , which means its output voltage and current are perfectly lined up, and its phase angle is within  $1^\circ$  of the AC power grid. The inverter has an internal com.

## Grid-connected solar inverters can be divided into

### [Solar Integration: Inverters and Grid Services Basics](#)

As more solar systems are added to the grid, more inverters are being connected to the grid than ever before. Inverter-based generation can ...
