

Icelandic wind power storage system manufacturer

Overview

In summer 2022, the company wpd Ísland ehf. was established in Reykjavík with the main objective of developing, constructing and operating onshore wind projects in Iceland.

In summer 2022, the company wpd Ísland ehf. was established in Reykjavík with the main objective of developing, constructing and operating onshore wind projects in Iceland.

Built to be mounted on commercial towers, reduces operational costs through an increase in backup power time and reliability as well as reduced maintenance and failures, therefore minimizing total downtime. Robust turbine design results in little/no maintenance over 20-year life-time Start up.

Iceland is one of the windiest places in the world on land. Wind power originates in the sun and its rays, as the sun's rays and the Earth's atmosphere drive the wind-and the weather system. These systems develop enormous amounts of energy. Cold air is denser than hot air. While hot air rises.

IceWind blows a wind of change on the energy market IceWind, an Iceland-based company, has developed small, vertical-axis wind turbines capable of powering remote infrastructure, an innovative technology that relies on a unique design. The firm is pursuing an ambitious goal: to replace diesel.

In summer 2022, the company wpd Ísland ehf. was established in Reykjavík with the main objective of developing, constructing and operating onshore wind projects in Iceland. Strengthened by the experience of 30 successful years of the wpd Group, wpd Ísland ehf. is developing "green field" projects.
