

Inner double glass components

Overview

Insulating glass (IG) consists of two or more panes separated by a space to reduce heat transfer across a part of the building envelope. A window with insulating glass is commonly known as double glazing or a double-paned window, triple glazing or a triple-paned window, or a quadruple-paned window, depending upon how many panes of glass are used.

The primary components of a double-glazed window include the outer pane, inner pane, spacer bar, and sealant. The outer and inner panes are typically made of glass, with a gap between them that is filled with air or gas for insulation.

The primary components of a double-glazed window include the outer pane, inner pane, spacer bar, and sealant. The outer and inner panes are typically made of glass, with a gap between them that is filled with air or gas for insulation.

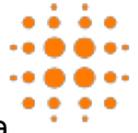

Understanding the parts of a double glazed window can simplify both installation and maintenance. A clear visual representation helps to identify each component's role in ensuring insulation and energy efficiency. The window typically consists of two panes of glass, separated by a spacer bar that.

A sectioned diagram of a fixed insulating glass unit (IGU), indicating the numbering convention used in this article. Surface #1 is facing outside, surface #2 is the inside surface of the exterior pane, surface #3 is the outside surface of the interior pane, and surface #4 is the inside surface of the interior pane.
