

# Is there a high demand for energy storage power

## Overview

---

While early adopters continue leading in deployment, activity across the country shows clear demand for utility-scale energy storage as a solution to rising electricity prices and soaring energy demand. Texas, California, and Arizona added more than 1 GW each.

While early adopters continue leading in deployment, activity across the country shows clear demand for utility-scale energy storage as a solution to rising electricity prices and soaring energy demand. Texas, California, and Arizona added more than 1 GW each.

Houston/WASHINGTON, D.C., September 26, 2025 — The U.S. energy storage market set a record for quarterly growth in Q2 2025, with 5.6 gigawatts (GW) of installations, according to the latest U.S. Energy Storage Monitor report released today by the American Clean Power Association (ACP) and Wood.

The United States closed 2024 with record-breaking storage installation numbers, and each coming year is predicted to be more charged than the last. Whether installed solo on utility-scale sites or attached with solar in the residential market, battery energy storage has found its stride. “The.

Energy storage is the linchpin of the clean energy transition, which is reflected by the energy storage market's meteoric growth. Wood Mackenzie, a leading global provider of data for the energy sector, shows a 100% increase in 2022-23, with another 45% jump expected in 2024. The first quarter of.

Battery storage is rapidly transforming the electric utility landscape, providing a critical tool for enhancing grid reliability, integrating intermittent renewables, and optimizing system flexibility. As utilities face increasing load growth, aging infrastructure, and decarbonization mandates.

Currently, there are 16 gigawatts of battery storage in the U.S., and this capacity is expected to exceed 40 GW by the end of 2025. While battery capacity continues to grow (mostly from lithium-ion batteries), there is also focus on developing longer-term options that could provide stored energy.

Global energy storage additions are on track to set another record in 2025 with the

two largest markets – China and US – overcoming adverse policy shifts and tariff turmoil. Annual deployments are also set to scale in Germany, the UK, Australia, Canada, Saudi Arabia and Sub-Saharan Africa, driven.
