

# Italian mobile energy storage project

## Overview

---

Italy's largest second-life battery energy storage system was officially launched at Rome-Fiumicino airport yesterday. State-owned gas and electric company Enel's 2.5 MW/10 MWh Pioneer project comprises 762 battery packs and modules.

Italy's largest second-life battery energy storage system was officially launched at Rome-Fiumicino airport yesterday. State-owned gas and electric company Enel's 2.5 MW/10 MWh Pioneer project comprises 762 battery packs and modules.

A 200 MW battery energy storage system (BESS) in Umbria is the first planned site, with the developer eyeing planned MACSE energy storage auctions, Fer-X solar incentives, and post-Covid-reconstruction PNRR funding. London-based solar and energy storage developer Elgin has entered the Italian.

The Italian utility-scale battery storage market is one of the most exciting in Europe. Just under 4GWh is completed and/or operational, with a further 2GWh+ under construction. The demand for energy storage in Italy has been clear over the last half a decade, with solar and wind generation.

Italy broke new ground in energy storage with its very first battery storage auction, competitively awarding the full 10 gigawatt hours (GWh) of capacity put up for tender. One standout among the awards is GreenVolt, which bagged a 499 MWh battery project in southern Italy's Calabria. The project.

The Italian government has authorized eight BESS projects that will strengthen the stability of the power grid. Companies such as Edison Next and GreenGo stand out in this initiative. The investment in storage aligns with the capacity market and the first MACSE auction, scheduled for September 30.

Exide Technologies has signed a new contract with an Italian foundry, specializing in structural castings for the machine and energy sectors, to deliver its Solition Mega Three, a large-scale Battery Energy Storage System (BESS) tailored to commercial and industrial (C&I) needs. This project marks.

Italy's sun-drenched landscapes generate enough solar energy to power entire cities – until clouds roll in or nighttime hits. That's where Italian mobile energy storage suppliers come into play, acting like giant “energy shock absorbers” for

the grid. With 650MW of new storage capacity added in H1.
