

Large-scale energy storage project looking for cooperation

Overview

What is energy storage project deployment?

ESTAP facilitates the deployment of energy storage projects through public/private and state/federal partnerships. This is done by matching state-supported large-scale energy storage project proposals with the research needs of Sandia National Laboratories and DOE's Energy Storage Research program in the Office of Electricity.

What is energy storage analysis?

ESTAP conducts analysis of energy storage technical and economic opportunities. This includes analyzing proposed project technical specifications and operational parameters. Information dissemination is also part of their work.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

What is the difference between manufacturing and deployment of energy storage systems?

Manufacturing: Projects that manufacture energy storage systems for a variety of residential, commercial, and utility scale clean energy storage end uses.

Deployment: Projects that deploy residential, commercial, and utility scale energy storage systems for a variety of clean energy and clean transportation end uses.

Large-scale energy storage project looking for cooperation

[Energy Storage Technology Advancement Partnership](#)

DOE-OE and Sandia National Laboratories are interested in accelerating the pace of deployment of distributed electrical energy storage technologies through a cooperative ...
