

Lead-acid battery cabinet monomer

Overview

What is a monoblock battery made of?

The monoblocks making up the battery are made of flame retardant material according to UL 94 class HB or V0 standards, this type of construction makes them particularly suitable for installation in battery cabinets, where the fire safety aspect is essential.

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

Where can I find the instruction manual for the batteries?

Inside the door there is a document pocket containing the instruction manual for the batteries. The sections can be fixed together to form a single cabinet. Where required, the cabinet is completed by a special compartment or switch/disconnector cubicle containing the protection equipment.

What are the construction characteristics of recombination type lead-acid electric accumulators (valve-regulated Hermetic)?

The construction characteristics of the recombination type lead-acid electric accumulators (valve-regulated hermetic accumulators); the absence of acid fumes and the virtual absence of gaseous development allows it to be installed in suitable containment cabinets.
