

Libreville shaped solar panels

Overview

What shapes can Voltaic Systems make solar panels in?

At Voltaic, we manufacture custom and standard small solar panels and while most are rectangular, we have experience designing and deploying a full range of interesting shapes and sizes.

What shapes can custom small solar panels be?

At Voltaic, we manufacture custom and standard small solar panels and while most are rectangular, we have experience designing and deploying a full range of interesting shapes and sizes. Most standard small solar panels are rectangular in shape because they are easier to manufacture and offer the most efficient use of space.

Why are standard small solar panels rectangular?

Most standard small solar panels are rectangular in shape because they are easier to manufacture and offer the most efficient use of space. Each solar panel is constructed of one or more strings (in series) of individual solar cells, strung in a straight line using equally sized cell pieces.

How are solar cells arranged in a panel?

Each solar panel is constructed of one or more strings (in series) of individual solar cells. Strung by hand or machine, the strings are in a straight line using equally sized cell pieces. Most standard small solar panels are rectangular in shape because they are easier to manufacture and offer the most efficient use of space.
