

Moldova 2 6 billion wind power energy storage project

Overview

How much energy does Moldova have?

Moldova lacks domestic sources of fossil energy and must import substantial amounts of petroleum, coal, natural gas, and other energy resources. The primary energy supply in 2018 was about half natural gas, a quarter oil, and solid biomass at one-fifth.

What happened to Moldova's electricity supply in 2022?

In November 2022 the power station located in Transnistria which produced electricity from Russian gas ceased supplying Moldova with electricity. Electricity was imported from Romania, albeit at a higher cost, helped by a grant from the EU of €200m.

How can Moldova improve the energy sector?

National regulatory framework (both primary and secondary) improved in line with Moldovan energy commitments, ensuring that national authorities are better prepared and can respond to emergency situations in the energy sector and to the needs of the most vulnerable energy users;.

What is Moldova's energy plan?

The plan foresees a €43bn investment programme — equivalent to 2.5 times Moldova's GDP in 2024 but below the annual GDP projected for 2050 — to transform the national energy sector. The strategy aims to strengthen energy security, reduce greenhouse gas emissions and align Moldova with European sustainability standards.
