

# New Energy Network Base Station Construction

## Overview

---

Anticipated for construction between 2026 and 2030, the project will introduce four new electrical substations and establish a “ 345kV resilient backbone” to enhance energy transmission capacity.

Anticipated for construction between 2026 and 2030, the project will introduce four new electrical substations and establish a “ 345kV resilient backbone” to enhance energy transmission capacity.

Tokyo, February 7, 2025 - NEC Corporation (NEC; TSE: 6701) has developed a solution that enables the modernization of tasks, including planning, design and construction work, when telecommunications carriers install network infrastructure such as base stations. The introduction of this solution.

The Propel NY Energy Project, a \$3.2 billion initiative, aims to modernize New York State’s aging power grid by upgrading 90 miles of underground and submarine transmission lines. Spearheaded by the New York Power Authority (NYPA) and New York Transco, this public-private venture seeks to improve.

This 5MW / 20MWh facility will provide resilience and emergency backup power to the surrounding distribution network. The site will also boast two 180 kW Supercharge stations, serving as many as four electric vehicles at one time. This 20MW / 80 MWh project will be a first of its kind bulk energy.

To enhance the utilization of base station energy storage (BSES), this paper proposes a co-regulation method for distribution network (DN) voltage control, enabling BSES participation in grid interactions. In this paper, firstly, an energy consumption prediction model based on long and short-term.
