

New energy plus energy storage

Overview

A hybrid power plant coupling solar PV with battery storage, built as a 'non-wires alternative' to more expensive network upgrades, has gone online in Upstate New York. The New York town of Cicero is served by the Pine Grove substation in utility National Grid's service territory.

Local Law 181 of 2019 (LL181) requires the City of New York to conduct a feasibility study on the applicability of different types of utility-scale energy storage systems (ESS) on City buildings and to install such systems on those buildings where cost effective.¹ NYC's Department of Citywide.

With around 500 MW of battery storage now online, New York's draft plan has big aims for 2040. New York has formalized its clean energy goals in a new draft State Energy Plan, setting a course to deploy 9.4 GW of battery energy storage systems (BESS) by 2040. The plan establishes an interim target.

New lithium-free energy storage technology generates electricity with no moving parts. Support CleanTechnica's work through a Substack subscription or on Stripe. US presidents come and go, but the renewable energy transition is permanent and inevitable. Also, follow the money. Despite the abrupt.

Energy storage is the capture of energy produced at one time for use at a later time [1] to reduce imbalances between energy demand and energy production. A device that stores energy is generally called an accumulator or battery. Energy comes in multiple forms including radiation, chemical.
