The lesser prairie-chicken is a species of prairie grouse endemic to the southern and central high plains of the United States, commonly recognized for its feathered tarsi (legs), stout build, ground-dwelling habit, and lek mating behavior. The LEPC is closely related and generally similar in.

The safe and reliable installation of photovoltaic (PV) solar energy systems and their integration with the nation's electric grid requires timely development of the foundational codes and standards governing solar deployment. Technological advances, new business opportunities, and legislative and.

Solar photovoltaics (PV) and wind power have been growing at an accelerated pace, more than doubling in installed capacity and nearly doubling their share of global electricity generation from 2018 to 2023. This report underscores the urgent need for timely integration of solar PV and wind capacity.

An Environmental Impact Assessment (EIA) is a systematic process used to evaluate the potential environmental effects of proposed projects before they are constructed. These assessments are designed to provide a comprehensive picture

ECT's experts have analyzed these developments and outlined key takeaways to help you stay on track. Facing delays or need guidance navigating these shifts?

Does EO require a 'preferential treatment' for wind and solar facilities?

That EO explicitly directed the Secretary of the Interior to review and revise policies to eliminate any “preferential treatment” for wind and solar facilities.

How to encourage wind and PV power generation?

Among the policies to encourage wind and PV power generation, the most important is the fixed feed-in tariff. High subsidies and the guarantee of full Internet access have attracted large amounts of capital, which has greatly stimulated the rapid growth of installed wind and PV capacity.

How do solar and wind projects affect water resources?

Solar and wind projects can affect both the quantity and quality of local water resources. EIAs assess potential changes in water usage, including the impact on local water bodies and groundwater levels. For solar farms, water is often needed for cleaning panels, while wind farms may affect water runoff patterns.
