

Road transportation of solar container lithium battery packs

Overview

ADR 2025 introduces several significant changes for the transport of lithium batteries by road. The main changes are stricter test criteria for batteries, more extensive requirements for temperature control during transport, and new regulations for the transport of used and damaged.

ADR 2025 introduces several significant changes for the transport of lithium batteries by road. The main changes are stricter test criteria for batteries, more extensive requirements for temperature control during transport, and new regulations for the transport of used and damaged.

This compliance resource was prepared to assist shippers to safely package lithium cells and batteries for transport by all modes according to the latest (May 10, 2024; HM-215Q) regulatory requirements. This publication directs readers to scenario-based shipping guides that outline the requirements.

Not all shipping companies can ship lithium batteries. So first and foremost, when shipping lithium batteries by road, sea, rail or air, you should choose a reputable carrier that has guidelines in place for shipping these items, together with trained personnel who understand how lithium batteries.

Transporting lithium batteries safely is crucial due to their energy density and potential hazards if mishandled. Whether you're transporting batteries for personal use or commercial purposes, following proper safety protocols is essential. Here's a comprehensive guide on how to transport lithium.

Lithium batteries need to be shipped with care to avoid issues like delays or rejected cargo. Due to their potential fire risk, they are considered dangerous goods and must follow international rules for packaging, labelling, documentation, and approvals. This guide zeroes in on lithium-ion and.

The ADR regulations for lithium batteries will undergo significant changes in 2025 that will affect road transport. The new regulations impose stricter requirements on packaging, classification and documentation in order to increase safety during transport. If you work with lithium batteries, it is.
