

# Self-built house solar energy system

## Self-built house solar energy system

### [When to use self, & self, & mut self in methods?](#)

Self is an alias for the type that the impl block is for. The rules of ownership and borrowing apply to self as they apply to any other parameter (see e.g. this answer). Examples ...

## sql

A self join is a join of a table with itself. A common use case is when the table stores entities (records) which have a hierarchical relationship between them.

## Difference between 'cls' and 'self' in Python classes?

Why is cls sometimes used instead of self as an argument in Python classes? For example: class Person: def \_\_init\_\_(self, firstname, lastname): self.rstname = firstname self.

## Python class methods: when is self not

## needed

17 What is self? In Python, every normal method is forced to accept a parameter commonly named self. This is an instance of class - an object. This is how Python methods ...

## How to type annotate a method that returns self?

This is also relevant for special methods, for example `__enter__` traditionally returns self, so it would be nice to have a way to specify this without needing to even mention it in ...
