

# Selling solar power generation and energy storage to third parties

## Overview

---

Third-party solar installations are arrangements where an independent company or investor owns and operates a solar power plant, selling the generated power to other parties. These installations can range from large-scale solar farms to smaller, distributed generation systems.

Third-party solar installations are arrangements where an independent company or investor owns and operates a solar power plant, selling the generated power to other parties. These installations can range from large-scale solar farms to smaller, distributed generation systems.

Third-party solar power plant installations offer two main advantages to sellers which consist of financial rewards and potential market expansion. The procedure needs thorough planning coupled with legal requirements and market-sensitive intelligence for its successful execution. Third-party solar.

A Solar Power Purchase Agreement (SPPA) is a financial arrangement in which a third-party developer owns, operates, and maintains the photovoltaic (PV) system, and a host customer agrees to site the system on its property and purchases the system's electric output from the solar services provider.
