

Several solar container communication station inverters in rural China

Overview

The document reveals the presence of unauthorized and fraudulent communication devices in several Chinese-made solar power inverters.

The document reveals the presence of unauthorized and fraudulent communication devices in several Chinese-made solar power inverters.

The issue could be important to facilities managers if they oversee on-site solar arrays or battery storage systems, with Chinese-made inverters on them, to provide energy resilience. U.S. energy officials have found "unexplained" communications equipment inside some Chinese-made inverter devices, according to a report by Reuters published Wednesday. The document reveals the presence of unauthorized and fraudulent communication devices in several Chinese-made solar power.

LONDON—U.S. energy officials are reassessing the risk posed by Chinese-made devices that play a critical role in renewable energy infrastructure after unexplained communication equipment was found inside some of them, two people familiar with the matter said. Power inverters, which are.

For months, experts examining renewable energy equipment imported from China have been quietly finding rogue components in solar inverters and large batteries, two people familiar with the investigations told Reuters. These undocumented communication modules offer an invisible back door into.

U.S. energy officials have discovered hidden communication devices in solar energy equipment supplied from China. These are primarily inverters used to connect solar panels and wind turbines to power grids, as well as batteries, heat pumps, and chargers for electric vehicles. Although the inverters.

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy infrastructure after discovering hidden communication devices inside certain solar inverters. A Reuters investigation, citing two individuals familiar with the matter, revealed.
