

# Solar Mars System

## Overview

---

Scientists have theorized that during the , Mars was created as the result of a of run-away accretion of material from the that orbited the Sun. Mars has many distinctive chemical features caused by its position in the Solar System. Elements with comparatively low boiling points, such as , , and , are much more common on Mars than on Earth; these elements were probably pushed outward by the yo.

## Solar Mars System

### Mars

Overview  
Natural history  
Physical characteristics  
Geography and features  
Atmosphere  
Hydrology  
Orbital motion  
Moons

Scientists have theorized that during the Solar System's formation, Mars was created as the result of a random process of run-away accretion of material from the protoplanetary disk that orbited the Sun. Mars has many distinctive chemical features caused by its position in the Solar System. Elements with comparatively low boiling points, such as chlorine, phosphorus, and sulfur, are much more common on Mars than on Earth; these elements were probably pushed outward by the yo...
