The Intech Energy Container is a fully autonomous power system developed by Intech to provide electricity in off-grid locations. Each container is equipped with a photovoltaic array, a battery bank, and a generator — all custom-sized to meet the specific needs of the customer. With integrated.

Shipping container solar systems are transforming the way remote projects are powered. These innovative setups offer a sustainable, cost-effective solution for locations without access to traditional power grids. Whether you're managing a construction site, a mining operation, or an emergency.

Off-grid solar storage systems are leading this shift, delivering reliable and clean power to locations worldwide. Among the most scalable and innovative solutions are containerized solar battery storage units, which integrate power generation, storage, and management into a single, ready-to-deploy.

In summary, any situation needing reliable, portable power – particularly where the grid is impractical – is a perfect candidate for a solar-powered container solution. What are my options?

To power a container, you have three main choices: Grid connection: If a utility line is accessible, you can.

Integrating necessary power equipment such as transformers, switchgear, energy storage units and control modules into a transportable compact container, it can quickly and stably provide power even in remote areas or areas with scarce infrastructure. Imagine this: with one portable device, you can.
