

Solar panels provide on-site energy supply

Overview

A physical on-site solar installation provides direct power to the site, which reduces grid energy dependence. Further, distributed solar at a company's premises is a sterling example of deep additionality — projects that lead to new renewable energy capacity.

Installing on-site renewable energy systems is a common strategy facility owners can use to save money, reduce their greenhouse gas emissions, and add resiliency to their facilities by generating their own electricity. Many facilities have recognized the advantages of on-site renewable energy.

Onsite solar is an asset installed in the same location where the energy generated will be consumed. For each kilowatt-hour (kWh) the onsite solar asset produces, a kWh of consumption will be offset for a buyer of renewable energy, or offtaker. These systems are often described as “behind the.
