

Solar panels removed from Monterrey Mexico

Overview

Part of an \$18 million plant expansion investment, the newly installed solar panel array is the largest project of isolated battery-powered supply in Mexico. In total, close to 10,000 panels have been installed across Monterrey's three plants, with plans to be producing energy in 2024.

Part of an \$18 million plant expansion investment, the newly installed solar panel array is the largest project of isolated battery-powered supply in Mexico. In total, close to 10,000 panels have been installed across Monterrey's three plants, with plans to be producing energy in 2024.

Our team at Trane Monterrey is taking bold action to lead the way in responsible operations, installing photovoltaic panels and a biological wastewater treatment plant to reduce absolute energy consumption and achieve net positive water consumption for production across three plants. We're leading.

Mexico City, July, 2025 — LONGi, the world's leading manufacturer of photovoltaic technology, announced its affiliation with Rafiqui, a Mexican non-profit civil organization dedicated to offering recycling solutions for decommissioned solar modules, in partnership with energy sector companies in.

Solar technology company LONGi has announced a partnership with Rafiqui, a Mexican non-profit organization dedicated to recycling decommissioned photovoltaic (PV) modules. The partnership aims to establish the infrastructure needed to recycle end-of-life solar panels in Mexico. Current recycling.

Rafiqui, a circular economy and recycling project, will initially process up to 1,000 tons of solar panels that have reached the end of their useful life. Their actions will be non-profit and will help recover materials and minimize environmental impact. The initiative was born from a group of.

At the forefront of this effort is Rafiqui, Mexico's first solar panel and lithium battery recycler. Rafiqui's mission is two-fold: to recycle solar panels at the end of their life cycle or in cases of premature dismantling, and to donate functional panels to vulnerable communities, providing them.

The majority of these half-million people are in Mexico's three largest cities Mexico

City, Guadalajara, and Monterrey. Another region that has high rates (more than \$.20/kWh) is the La Baja de California. Solar developers and. The majority of these half-million people are in Mexico's three.
