SEOUL, May 26 (AJP) - South Korea has launched its most ambitious energy storage initiative yet, opening the door to what officials estimate could become a \$29 billion market by 2038 — offering a much-needed boost to domestic battery manufacturers grappling with a global slowdown in electric.

Korea Electric Power Corp. (KEPCO) has completed construction of a large battery energy storage project in Miryang, Gyeongsangnam-do Province. As Asia's largest battery energy storage system for grid stabilization, it has a power output of 978 MW and a storage capacity of 889 MWh. The completion.

As part of its ambitious energy transition, South Korea is launching a major procurement effort for battery energy storage systems (BESS), seeking to add 540MW of new capacity to its grid infrastructure. This move underscores the country's growing urgency to manage renewable energy intermittency.

KEPCO, South Korea's biggest electric utility, has welcomed the start of commercial operations at a portfolio of large-scale battery energy storage system (BESS) assets. Korean Electric Power Corporation (KEPCO) said last week (26 September) that a completion ceremony was held for what it claimed.

Global energy storage capacity was estimated to have reached 36,735MW by the end of 2022 and is forecasted to grow to 353,880MW by 2030. South Korea had 6,848MW of capacity in 2022 and this is expected to rise to 36,454MW by 2030. Listed below are the five largest energy storage projects by.

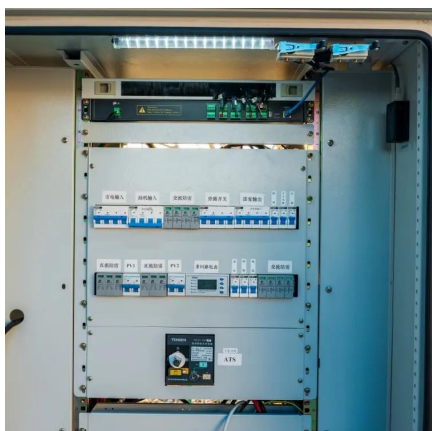

Korean utility KEPCO completed a 978 MW battery project that us billed as Asia's

largest battery energy storage system for grid stabilization purposes. From ESS
News South Korean utility Korea Electric Power Corp. (KEPCO) has officially finished
construction works on a massive battery energy.
