

Southern Europe Energy Storage Transformation Project

Overview

It offers a comprehensive view of the continent's storage infrastructure—from pumped hydro and battery systems to emerging technologies like hydrogen and thermal storage. With an intuitive dashboard and interactive map, the tool allows users to explore:.

It offers a comprehensive view of the continent's storage infrastructure—from pumped hydro and battery systems to emerging technologies like hydrogen and thermal storage. With an intuitive dashboard and interactive map, the tool allows users to explore:.

During an exclusive interview with Energía Estratégica at Genera 2025, the company's Regional Director for Southern Europe outlined why this is a decisive moment for integrating energy storage with grid-flexibility services, and revealed the commercial milestones guiding the firm's entry into new.

Building on this progress and to keep the momentum, in 2023, EU countries set the binding target of achieving a share of at least 42.5% renewables in the energy mix by 2030. Harnessing the energy of abundant renewable sources like the wind, the sun and our rivers offers a sustainable and crucial.

SolarPower Europe marks its 40th anniversary with a new tagline 'SolarPower Europe: Solar, Storage, and Flexibility' and plans to establish a dedicated European battery storage platform. The Association launches two new reports on flexibility, 'Flexible Buildings, Resilient Grids' and 'Embracing.

A new interactive platform—the European Energy Storage Inventory —has been launched to provide near real-time insights into energy storage deployment across the EU, marking a major step toward a smarter and more sustainable energy system. Developed as part of the REPowerEU Plan, the platform is the.

Since 2020, the Commission publishes yearly progress reports on the competitiveness of clean energy technologies that present the current and projected state of play for different clean and low-carbon energy technologies and solutions. The 2025 report highlighted the urgent need to quickly deploy.

The aim of the European Energy Storage Inventory is to record all European energy

storage projects by status – in operation, planned and under construction –, by location and by technology. Most projects have been recorded in Germany so far. The dashboard can be filtered by country, project status.

Southern Europe Energy Storage Transformation Project

European energy storage: a new multi-billion-dollar asset class

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new ...
