

Tehran Communications 5G base station is now available

Overview

5G is the fifth generation of technology and the successor to . First deployed in 2019, its technical standards are developed by the (3GPP) in cooperation with the 's program. 5G networks divide coverage areas into smaller zones called cells, enabling d.

How does 5G work?

5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.

What is 5G New Radio (NR)?

The 5G New Radio (NR) interface defines two main operating ranges: Frequency Range 1 (FR1) – below 7.125 GHz, also called sub-6 GHz. It covers low- and mid-band frequencies and supports channel bandwidths up to 100 MHz. Typical download speeds range from 5 to 900 Mbit/s depending on conditions.

Who makes 5G radio & core systems?

Major suppliers of 5G radio and core systems included Altiostar, Cisco Systems, Datang Telecom/Fiberhome, Ericsson, Huawei, Nokia, Qualcomm, Samsung, and ZTE. Huawei was estimated to hold about 70 percent of global 5G base stations by 2023.

Is the first real 5G specification completed?

ITU. Archived from the original (PDF) on January 8, 2019. Retrieved August 16, 2019. ^ Gartenberg, Chaim (December 21, 2017). "The first real 5G specification has officially been completed". The Verge. Archived from the original on January 7, 2019. Retrieved June 25, 2018. ^ Flynn, Kevin. "Workshop on 3GPP submission towards IMT-2020". 3GPP.
