### **Overview of Cells**

Cells are the microscopic units that make up living organisms. Learn about the characteristics and structures that all cells have in common.

[Request Quote](#)

## Cell

All cells can be sorted into one of two groups: eukaryotes and prokaryotes. A eukaryote has a nucleus and membrane-bound organelles, while a prokaryote does not. ...

[Request Quote](#)

## Cell (biology)

Cell theory, developed in 1839 by Matthias Jakob Schleiden and Theodor Schwann, states that all organisms are composed of one or more cells, that cells are the fundamental unit of structure ...

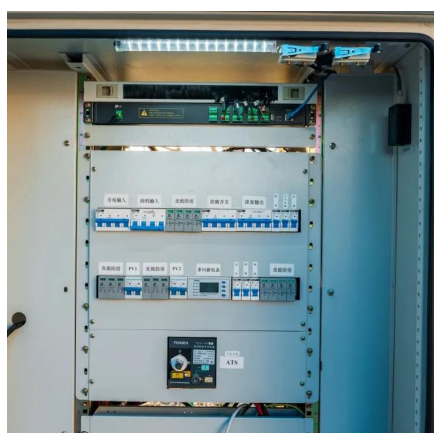

[Request Quote](#)

## Cells

Cells are the basis of all life on Earth, producing every living organism, from a single cellular bacteria, through to trillions of cells making up a human. All living species on ...

[Request Quote](#)

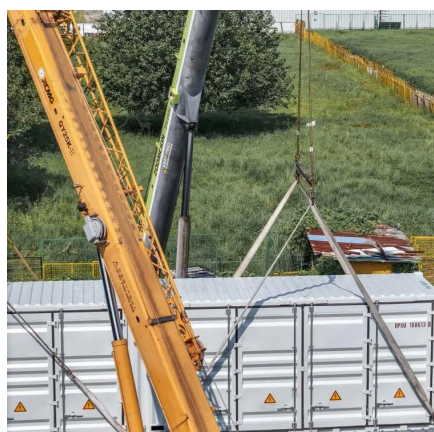

## Cells

Learn how cells work together in tissues, organs, and organ systems. In 1665, Robert Hooke coined the term cell to describe the structures he could see in cork with some of the first ...

[Request Quote](#)

[What Is a Cell? , Learn Science at Scitable](#)

Some cells are organisms unto themselves; others are part of multicellular organisms. All cells are made from the same major classes of organic molecules: nucleic acids, proteins, carbohydrates

[Request Quote](#)

## Cells

All living beings are made up of cells. Some of them are made up of only one cell and others have many cells. The average adult human body has around 37.2 trillion cells. WOW, that's a lot of ...
