What type of Inverter should I buy?

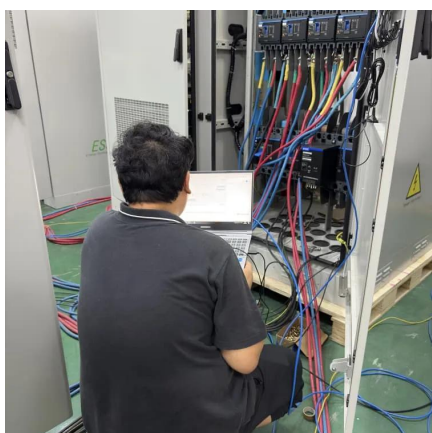

This equipment is ideal for installation in residential areas, is highly efficient, reliable and durable. Inverters with single-phase and three-phase alternation current output of 220 and 380 V are readily available in our online store. Three-phase models can be used in homes or industrial sites.

Are string inverters good?

It's reasonably cheap and highly efficient. Shading is what string inverters fear the most. When one solar panel in the string is overshadowed by a tree or a building, it brings down the performance of other panes as well. You can add power optimizers to each PV module and the drop in production of one of them won't affect the others.
