Overview

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a when the input power source or fails. A UPS differs from an auxiliary or or in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteri.

Unlike a common emergency power system or standby generator, an uninterruptible power supply can provide nearly instantaneous protection from input power interruptions by using the energy stored in the batteries.
