

Uruguay Base Station Distribution Cabinet Company Energy

Overview

Energy in Uruguay describes and production, consumption and import in . As part of climate mitigation measures and an energy transformation, Uruguay has converted over 98% of its electrical grid to sustainable energy sources (primarily solar, wind, and hydro). are primarily imported into Uruguay for transportation, industrial uses and applicati.

What is energy in Uruguay?

Energy in Uruguay describes energy and electricity production, consumption and import in Uruguay. As part of climate mitigation measures and an energy transformation, Uruguay has converted over 98% of its electrical grid to sustainable energy sources (primarily solar, wind, and hydro).

Why is Uruguay a net importer and net exporter of electricity?

Incorporating new, local, and renewable sources into its electricity matrix transformed Uruguay from a net importer to a net exporter of electricity, positively impacting the country's energy independence and resolving historical supply issues.

What is Uruguay's energy strategy?

In 2005, Uruguay initiated a dramatic shift in its energy strategy, moving from petroleum-based electricity generation to renewable sources. In 2024, Uruguay generated 99 percent of its electricity from renewable sources using hydropower (42 percent), wind (28 percent), and biomass (26 percent).

Why does Uruguay have a high percentage of biomass energy?

Uruguay's high percentage of biomass energy generation is a result of the cellulose industry's expansion, where energy is generated from wood waste products. Biomass energy producing companies not only use electricity for their own consumption but also sell electricity to the state-owned company UTE.
