

Vilnius Off-Grid Solar Container 10kW Government Procurement

Overview

Which energy storage facilities will provide Lithuania with instantaneous electricity reserve?

The Government of the Republic of Lithuania appointed Energy cells as the operator of the storage facilities that will provide Lithuania with an instantaneous electricity reserve. Energy cells signed a contract with the winning Siemens Energy and Fluence consortium. Energy storage facilities system design works were started.

How will Lithuania's energy storage system work?

The energy storage system, which will provide Lithuania with an instantaneous isolated operation electricity reserve until synchronisation with the continental European networks (CEN), will be used after synchronisation for the integration of energy produced from renewable sources.

When will Lithuanian power plants start supplying power?

Lithuanian power plants currently operating in the IPS/UPS system can start supplying power within 15 minutes. Once synchronised with the CEN system, the energy storage facilities will be able to store electricity generated by solar or wind power plants and feed it into the grid when needed.

Why is electricity storage important in Lithuania?

Lithuania's system of electricity storage facilities is essential to ensure the security of Lithuania's energy system and its ability to operate in isolated mode.
