

What does the solar system include

Overview

NASA describes the Solar System as a planetary system, including the Sun and all objects that orbit it. [17] When not used as a proper noun and written without capitalization, "solar system" may refer to either the Solar System itself or any system reminiscent of the Solar System. [14]OverviewThe Solar System consists of the Sun and the objects that orbit it. The name comes from Sōl, the Latin name for the Sun. It was formed when a dense region of a collapsed nebula collapsed, creating the Sun.

The Solar System includes the Sun and all objects that are bound to it by gravity and orbit it. The Solar System describes the Solar System as all objects that are bound to the Sun.

The Solar System formed at least 4.568 billion years ago from the gravitational collapse of a region within a large molecular cloud. This initial cloud was likely several light-years across and probably birthed several stars.
