

# Where are the 5G base stations in Bishkek

## Overview

---

Which countries have the best 5G coverage?

The really big standout is India which seems to have blanketed the country in 5G coverage within just the last 2 years. This contrasts strongly with its neighbours like Pakistan, Myanmar and even large parts (of mostly sparsely populated) China. Europe also has good coverage up until you reach Ukraine and Belarus and into Russia.

How does 5G work?

5G networks divide coverage areas into smaller zones called cells, enabling devices to connect to local base stations via radio. Each station connects to the broader telephone network and the Internet through high-speed optical fiber or wireless backhaul.

What is 5G New Radio (NR)?

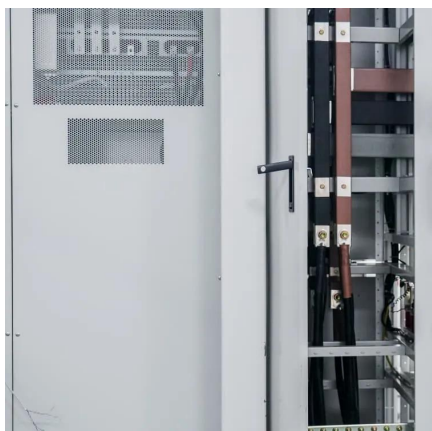

The 5G New Radio (NR) interface defines two main operating ranges: Frequency Range 1 (FR1) – below 7.125 GHz, also called sub-6 GHz. It covers low- and mid-band frequencies and supports channel bandwidths up to 100 MHz. Typical download speeds range from 5 to 900 Mbit/s depending on conditions.

How are 5G measurements done?

Regarding the collection of 5G measurements, it is done in the same way as for the previous technologies by our App users, with the difference that these users must of course be equipped with mobile and SIM card both 5G compatible. These measurements are therefore carried out in real conditions, directly in the field.

## Where are the 5G base stations in Bishkek

### [Bishkek communication network base station](#)

This paper discusses the site optimization technology of mobile communication network, especially in the aspects of enhancing coverage and optimizing base station layout.
